Your total score

10

The score is computed based on 4 different indicators:
O) number of computed orders;
R) number of reminders received;
F) number of forfeited pickups;
M) number of modified orders.

When there is not enough availability of products for all orders, we give preferences to the customers with higher score.

As was pointed out in the UML scheme, only one column is used for providing estimations and current available quantity. The date of update is given bc it is an indicator of how fresh is the info

If between 9AM Saturday morning and 9AM Monday - it is fresh, current quantity
